Sahibganj, Jharkhand, India

SKILLS

Languages
Python, TypeScript, SQL

Backend
Django, FastAPI, REST APIs, data pipelines

Frontend
Next.js, React, Tailwind CSS

Data & Infra
PostgreSQL, Supabase, Docker, AWS S3

Domains
Portfolio analytics, applied cryptography, generative AI

EDUCATION

Master of Computer Applications (MCA)
Indira Gandhi National Open University (IGNOU)
2026 - Present

Bachelor of Computer Application (BCA), CGPA 7.5
Sahibganj College
2022 - 2025

LANGUAGES

English, Hindi

PROFILE

Backend engineer building AI-powered products end to end, from data pipelines and APIs to the interfaces on top. Founder of MonkCapital, a wealth analytics and IPO tracking platform with real return metrics like XIRR and CAGR, and builder of LokKatha, a sourced archive of Indian folklore. Self-taught and quick to pick up new technologies.

EXPERIENCE

Founder & Builder — Sep 2025 - Present
MonkCapital · Self-employed · India

- Building an AI-powered wealth management platform focused on portfolio analytics and long-term investing
- Designed backend architecture for handling financial data, user portfolios, and analytics
- Implemented portfolio performance metrics, asset allocation tracking, and cash-flow analysis
- Developing scalable APIs and data pipelines for financial and market data ingestion
- Laying the groundwork for AI-driven insights such as risk profiling and intelligent portfolio analysis

Founder & Builder — 2025 - Present
LokKatha · Personal · India

- Built a searchable folklore archive with classification by entity type, threat level, region, and language
- Designed structured entity pages for mythology, sightings, rituals, regional context, and historical references
- Added archive discovery tools including guided browsing, random entries, long-form guides, and newsletter updates
- Created a scalable content model for folklore records while preserving cultural and regional metadata

Freelance Backend & Data Engineer — 2023 - Mar 2025
Independent Freelancer · Contract · Remote

- Built backend services and APIs using Python for data-driven applications
- Developed automation scripts and pipelines to process, clean, and analyze data
- Implemented data analysis workflows to generate insights and reports for clients
- Designed and optimized database schemas and queries for performance and reliability
- Worked independently with clients to deliver production-ready backend solutions

SELECTED PROJECTS

Glyph — Next.js, Supabase, S3, Docker
End-to-end encrypted messenger with seed-phrase identity: BIP-39 derived Ed25519 and X25519 keys, XChaCha20-Poly1305 sealed messages, and a server that only ever stores ciphertext.

Nimbus — Next.js, Supabase, AWS S3
Self-hosted file manager with client-side encrypted vaults, version history, and protected share links that expire.

StableFusion — Python, Stable Diffusion
Image generation workstation with text-to-image, inpainting, ControlNet pose guidance, and checkpoint-to-diffusers model conversion.
